Other accessories/parts:	Flanges, plugs, lower part, stand pipe, connecting pieces, mounting brackets
Product details available in the products database at www.blucher.com	

For the owner/user:

BLÜCHER® WaterLine shower channel in stainless steel AISI 304 has been installed.

Prior to starting use:

- Check that the channel has been cleaned leaving no concrete spills etc.
- Check that a water trap has been installed.

Normal operation:

In case of many impurities it may be necessary to clean the water trap at appropriate intervals.

Cleaning:

- Remove the grating.
- Clean channel, trap and grating as necessary.
- Install the grating.

Cleaning of drains with colour-coated surface:

The coloured BLÜCHER drainage products have been PVD coated to add elegant colours to the stainless steel surface.

Cleaning requirements for these coloured products are in principle the same as for the naturally coloured stainless steel products – discolouring can, however, occur if detergents containing bleach (chloride or hydrogen peroxide) or strong acid/caustic detergents are used.

The products are best cleaned by washing with mild soapy water on a soft cloth. Never use steel wool or sponge scouring pads.
